This workshop convened researchers from a range of science and engineering disciplines.

This Proceedings of a Workshop—in Brief was prepared by Sara Frueh as a factual summary of what occurred at the meeting. On the second day of the workshop, participants organized into small groups for a deeper exploration of research topics that had arisen, discussion of common challenges, hoped-for breakthroughs, and the national, transnational, and global context in which this research occurs.

The topics of interest include, but are not limited to the following: . In order to address this issue and produce truly human-aware artificial intelligence, systems must try to solve the interaction issues that accompany each unique application domain. This workshop will provide a place for AI researchers working in diverse areas such as machine learning, neural networks, human-aware AI, goal planning, robotics, and more to share their techniques and findings with those working in games research and the games industry.
