In this case, when a professional treats a young person with an eating disorder, the young person experiences the professional as an unhelpful or dangerous alternative to her protector, the eating disorder. This was noted in the context of illness related factors, such as hospitalisation and self-isolation, and also in relation to the impact of this on future interactions, in that it led patients to believe that they were no longer privy to group knowledge, shared the same interests or had the same social opportunities after discharge:

Unlike a neurological disorder, which generally can be pinpointed to a specific Superordinate Theme 3: Social Sensitivity The theme of social sensitivity was related to an increased likelihood of perceiving criticism and of experiencing negative affect to perceived criticism. Social information-processing and coping in adolescent females diagnosed with an eating disorder: toward a greater understanding of control. By using our website you agree to our use of cookies.
